

## Theorem I.27

Every nonempty set  $S$  that is bounded below has a greatest lower bound; that is, there is a real number  $L$  such that  $L = \inf S$ .

*Proof.* [Chapter I.3.Real.exists\\_isGLB](#)

□

## Theorem I.29

For every real  $x$  there exists a positive integer  $n$  such that  $n > x$ .

*Proof.* [Chapter I.3.Real.exists\\_pnat\\_geq\\_self](#)

□

## Theorem I.30 (Archimedean Property of the Reals)

If  $x > 0$  and if  $y$  is an arbitrary real number, there exists a positive integer  $n$  such that  $nx > y$ .

*Proof.* [Chapter I.3.Real.exists\\_pnat\\_mul\\_self\\_geq\\_of\\_pos](#)

□

## Theorem I.31

If three real numbers  $a$ ,  $x$ , and  $y$  satisfy the inequalities

$$a \leq x \leq a + \frac{y}{n}$$

for every integer  $n \geq 1$ , then  $x = a$ .

*Proof.* [Chapter I.3.Real.forall\\_pnat\\_leq\\_self\\_leq\\_frac\\_imp\\_eq](#)

□

## Theorem I.32

Let  $h$  be a given positive number and let  $S$  be a set of real numbers.

(a) If  $S$  has a supremum, then for some  $x$  in  $S$  we have

$$x > \sup S - h.$$

(b) If  $S$  has an infimum, then for some  $x$  in  $S$  we have

$$x < \inf S + h.$$

*Proof.*

### Theorem I.33 (Additive Property)

Given nonempty subsets  $A$  and  $B$  of  $\mathbb{R}$ , let  $C$  denote the set

$$C = \{a + b : a \in A, b \in B\}.$$

- (a) If each of  $A$  and  $B$  has a supremum, then  $C$  has a supremum, and

$$\sup C = \sup A + \sup B.$$

- (b) If each of  $A$  and  $B$  has an infimum, then  $C$  has an infimum, and

$$\inf C = \inf A + \inf B.$$

*Proof.*

- (b) [Chapter I.3.Real.inf\\_minkowski\\_sum\\_eq\\_inf\\_add\\_inf](#)

□

### Theorem I.34

Given two nonempty subsets  $S$  and  $T$  of  $\mathbb{R}$  such that

$$s \leq t$$

for every  $s$  in  $S$  and every  $t$  in  $T$ . Then  $S$  has a supremum, and  $T$  has an infimum, and they satisfy the inequality

$$\sup S \leq \inf T.$$

*Proof.* [Chapter I.3.Real.forall\\_mem\\_le\\_forall\\_mem\\_imp\\_sup\\_le\\_inf](#)
